Document 33119-11 PageID: 234719

Filed 08/22/24 Page 3 of 6

Richard Kradin, M.D. Crudge vs. Amcord, Inc.

Page 83 Page 84 1 5B, is a letter dated September 24th, 2020, 1 WILLIAM E. LONGO, Ph.D. 2 previously sworn as a witness, 2 also from Maegan Wilborn at the Kazan office, linking to 3 testified as follows: 3 Dr. Mark Krekeler's Rule 26 expert report from 2018 in 4 4 the New Jersey MDL. 5 EXAMINATION 5 BY MR. HYNES: 6 6 BY MR. HYNES: Q. Dr. Longo, have you reviewed Dr. Mark 7 Q. Hi, Dr. Longo. How are you this morning? 7 Krekeler's deposition in this case? 8 8 A. Yes, and I reviewed it before, I had a copy of A. Fine. 9 Q. Dr. Longo, just a reminder, you're still under 9 it before for the MDL, that's where that -- I believe is 10 10 oath, this is a continuation of your deposition in the where I saw that report before. 11 11 Reyes matter, okay? Q. Okay. And so just to be clear, you did review 12 12 Mark Krekeler's deposition testimony in the Reyes case? A. Right, I understand that. 13 MR. HYNES: Great. And for the housekeeping 13 A. I didn't review the testimony, no. I just 14 14 before we pick up where we left off the last time looked at the report. I did note that Dr. Sanchez's 15 around, I have marked two letters from Counsel for 15 testimony on that Monday, from the Monday when I was 16 Plaintiffs, as Exhibits 5A and 5B. 16 being deposed, so I reviewed all of that. 17 (Exhibits 5A and 5B marked for identification.) 17 Q. Okay. Okay. And have you had any additional 18 18 communications with attorneys for Mr. Reyes, since the MR. HYNES: 5A is a September 23rd letter from 19 Maegan, M-A-E-G-A-N, Wilborn of the Kazan office 19 Monday deposition? 20 20 A. Yes, sir. Joe Satterley called me yesterday, enclosing Dr. Longo's September 23rd, 2020, supplement 21 to the MAS project M71095, Janet Tiley's Johnson's Baby 21 or -- and said he was going to send me a number of J&J 22 Powder Container Split, as well as an October 2003 Brake 22 documents on testing for the Korean talc, like EBA's 23 2.3 Shoe Box, a Workplace Study, and also noting that testing, Foley's testing, there's Macron in there, and 24 today's deposition would begin at 10:00 a.m. Eastern 24 worldwide market documents, I think it's from NASHT from 25 25 about 1974 on testing that was done, the Consumer Page 85 Page 86 1 Council, I think it was in Japan, I've had that before, 1 aware of its own documents, these documents have been at 2 2 and they sent me the Patel testing on the Korean talc, issue in other cases so there should be no surprise to 3 but I already have that. And then that was it really. 3 J&J, but of course we can met and confer. 4 Q. Okay. Do you have a list of those? 4 MR. HYNES: Thanks, Henry. The issue is 5 5 A. He sent me the Sanchez, he said they got a Dr. Longo's review, reliance and opinions related to 6 transcript and I got that yesterday. 6 those documents, and we were not aware that Dr. Longo 7 Q. Did he include a list of the documents that he 7 had reviewed those documents or may have formulated 8 8 sent you yesterday along that phone call? opinions regarding those documents, which we would have 9 A. But I have them all printed out, take about 9 been keyed into had we been provided with information 10 10 five minutes, I can go through them. that he had been provided with those documents, but so 11 MR. HYNES: No need to walk through or read off 11 yes, this is something we can meet and confer about. them. Counsel for -- Henry, we can request production 12 12 MR. STEINBERG: I'm going to reserve further 13 of those materials and reserve our right to continue the 13 response to off-the-record time. 14 deposition for questioning on those documents which were 14 BY MR. HYNES: 15 15 provided to Dr. Longo, apparently yesterday, and not Q. Dr. Longo, we were talking about Exhibit 17 16 disclosed to Defense Counsel until just now. 16 when we left off the last time around. This is the 17 17 BY MR. HYNES: June 2019 Revision No. 1, for the baby diapering study 18 18 Q. Dr. Longo, have you had any additional No. 2; are you with me? 19 19 communications with experts for plaintiffs in this case, A. I am with you. 2.0 regarding this case, whether that's Dr. Madigan, 20 Q. Okay. And we were talking when we left off 21 Dr. Compton, Dr. Krekeler, Lee Poye or Dr. Egilman? 21 about some PLM analyses that were performed on several 22 A. No, sir. 22 of the Round 1 samples. We had bench sheet for sample 23 23 M65329-041 and a chain of custody form that suggested MR. STEINBERG: I'm going to jump in. I 24 24 apologize, my phone was on mute. We can meet and that in addition to that sample, sample M65329-043, and 25 confer, of course, these are J&J documents. J&J is 25 013 had also then analyzed that PLM. Do you recall the

Richard Kradin, M.D.

Crudge vs. Amcord, Inc.

Page 127

1 tremolite-actinolite detected and no cleavage fragment.

If we go to the second sample, 002, there's nothing detected in the ISO, but the Blount method does

4 have actinolite/tremolite observed, it's on the PLM

5 sheet, and actinolite tremolite cleavage fragments, and

6 I have the dispersion staining for 1, 2, 3, 4 -- 4

7 different tremolite-actinolite structures, and I have to

8 go back and research because this was actually Chinese.

9 This would be the first time we ever found amphibole 10 asbestos in a Chinese sample. Every other Blount sample

that we've ever done in a product, not only Johnson &

Johnson, but Chanel and others, were Chinese, the Blount

method has always been negative. So it's interesting to me.

But, the error is mine. The PLM analysis shows that the Blount was positive for Sample 2 and negative for Sample 1, so I have to do a supplement on this.

MR. HYNES: Okay. All right. Couple things. First off, with respect to my question about PLM analysis, I'll object to the nonresponsive portions and move to strike.

On the Korean or Philippine container data, we request production of that data, I will ask you a few questions about that momentarily.

//

Page 128

BY MR. HYNES:

Q. But first, you mentioned that in order to see something that -- in order to see chrysotile PLM in one of these cosmetic talc preparations, an analyst needs to have appropriate to training in order to see it, and my question is to you is, the person who is performing this PLM analysis for the 72 samples that we're talking about that we're part of Exhibit No. 11, was that mainly or entirely Paul Hess?

A. That was entirely Paul Hess.

Q. Okay. How many years of experience does he have analyzing materials like PLM?

A. 30 years.

Q. Okay. And is it your testimony that in 2018, when he was performing those PLM analyses on the 72 samples with refractive index oil of 1.550, he would not have adequate training or experience to identify chrysotile if it was present in those 72 samples?

A. No. You're taking it out of context. We never we're analyzing for chrysotile, and you can't take this 10 to 20 minute just verify that the fibrous talc is there, that we were analyzing the sample in 1.550.

Cosmetic talcs are milled extensively. Our second analyst that we did train, he has over 30 years experience, and when he took the McCrone cards, it was

Page 129

back in the time when Walter McCrone taught it himself,

and they were dealing with asbestos added products, where the chrysotile is these very large bundles, you

know, like the silly examples that Dr. Sanchez uses when

he says this is what it ought to look like.

It wasn't until we started, we looked at the calidria and used that as a standard where the analyst now knew that it had asbestos in it, but the Calidria bundles, the size ranges in there are very similar to the size ranges of the chrysotile in the sample. So they had to know what to look for. And I don't think, and so we could train any analyst and they would have to have decades of experience. And of course you have to have the kind of setup we have with our PLM scopes, so this is reproducible.

But those MDL samples, to say we looked at them in 1.550 and didn't find chrysotile, you know, that's a misrepresentation of what happened.

Q. With respect to the Korean or the Philippine market containers, so you're saying that the table I'm looking at, Exhibit 10, page 8, Table 1, if we look at that, so the narrative above where -- I guess, let's start there, let's start at the narrative.

Page 3 of 15, the narrative discussing sample 002, specifically notes, the second sentence there

Page 130

reads: The Blount, slash, PLM with heavy liquid separation was also non-detect for both amphibole asbestos and cleavage fragment, period.

So it's your testimony that that is not accurate: is that correct?

A. That is not accurate. I screwed this report up. The analytical data shows that 001 was below detection of Blount, and 002 tremolite-actinolite bundles were detected, observed, and photographed. So the original data always trumps anything that I have written.

I can fix this pretty quickly and then send it to my client. I don't know what time we're going to get done, but I've just got to change that and -- and then send it to my client, unless we go --

Q. So --

A. -- then you'll have to wait 'til Monday.

Q. So No. 1 is not accurate then, right?

A. Table 1, Table 1 is not accurate. Table 1 should read -- essentially Table 1 needs to be reserved on the Blount.

Q. Okay. Who did the quality control for this report?

A. On reading the report itself?

Q. On reading the report and making sure that the

Richard Kradin, M.D.

Crudge vs. Amcord, Inc.

		_	
	Page 227		Page 228
1	Q. Okay. So it seems like according to this	1	Q. All right. And so NB19-645 is one of those
2	sheet, those three aliquots of sample D58 were prepared	2	blanks that was prepared on September 5th, right?
3	on August 30, 2019, right?	3	A. Yes.
4	A. Let me look. 8-30-2019, that's what it would	4	Q. It was analyzed on September 18th, right?
5	state.	5	A. That's correct.
6	Q. Right. Then if we go to the next page, page 38	6	Q. Okay. And page 51 of the PDF, it's the second
7	of the PDF, all the samples there are redacted, but you	7	blank, blank No. NB19-646. That was also prepared on
8	can see on that right margin, again, there's two dates,	8	September, 5th right?
			A. Correct.
9	the 8-30-2019 continues down. And, I don't know, about	9	
10	ten samples down there's another line, and then a	10	Q. And it was analyzed on September 18th, right?
11	9-5-2019 appears for the samples underneath that, right?	11	A. Correct.
12	A. Correct.	12	Q. And then we've got sample NB19-647 on page 52
13	Q. Okay. So then if we turn to the next page,	13	of the PDF. That's the third blank that was prepared on
14	page 39 of the PDF, and we have three samples numbered	14	September 5th, right?
15	NB19-645, 646, and 647, right?	15	A. Yes.
16	A. That's correct.	16	Q. And that's analyzed on September 18th, right?
17	Q. And those three samples appear to have been	17	A. That's correct.
18	prepared on September 5th, 2019, right?	18	Q. Okay. So the three blanks here were prepared
19	A. Oh, I see. He wrote the "9" upside down.	19	on September 5th and analyzed on September 18th, right?
20	That's correct.	20	A. Correct.
21	Q. And then if we turn to page 50 of the PDF, it's	21	Q. And if we jump back up to page 37, the three
22	a sheet labeled "Edit TEM NOB blank result."	22	aliquots of Sample B58 were prepared on August 30th,
23	Are you with me?	23	right?
24	A. I'm getting there. Let's see. Page 50, yeah,	24	A. Just give me a second.
25	yes.	25	That's correct.
	Page 229		Page 230
1	-	1	
1 2	Q. All right. Put that to the side.	1 2	Q. So he's a well respected sort of expert on PLM

So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement
2 3 4 5 6 7 8 9 10	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct.	2 3 4 5 6 7 8 9 10	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is
2 3 4 5 6 7 8 9 10 11	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about	2 3 4 5 6 7 8 9 10 11	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this
2 3 4 5 6 7 8 9 10 11 12	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more	2 3 4 5 6 7 8 9 10 11 12 13	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right?
2 3 4 5 6 7 8 9 10 11 12 13 14	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like	2 3 4 5 6 7 8 9 10 11 12 13 14	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct.
2 3 4 5 6 7 8 9 10 11 12 13 14 15	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su?	2 3 4 5 6 7 8 9 10 11 12 13 14 15	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct. Q. And say
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su? A. Dr. Su.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct. Q. And say A. That's actually
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su? A. Dr. Su. MR. HYNES: Yeah. So it's I'll spell it for	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct. Q. And say A. That's actually Q. Go ahead.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su? A. Dr. Su. MR. HYNES: Yeah. So it's I'll spell it for the court reporter. It's S-H-U, hyphen, C-H-U-N; last	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct. Q. And say A. That's actually Q. Go ahead. A. That's on page 13?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su? A. Dr. Su. MR. HYNES: Yeah. So it's I'll spell it for the court reporter. It's S-H-U, hyphen, C-H-U-N; last name is Su, S-U.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct. Q. And say A. That's actually Q. Go ahead. A. That's on page 13? Q. Starts on 13.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su? A. Dr. Su. MR. HYNES: Yeah. So it's I'll spell it for the court reporter. It's S-H-U, hyphen, C-H-U-N; last name is Su, S-U. BY MR. HYNES:	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A. That's correct. Q. And say A. That's actually Q. Go ahead. A. That's on page 13? Q. Starts on 13. A. Oh right.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. All right. Put that to the side. And so AMA identified trace levels of chrysotile by TEM without separation in two of those three aliquots, right? A. That's correct. Q. And as we talked about before, your laboratory has not replicated those results using TEM without concentration to identify the presence of chrysotile in Chinese source Johnson's Baby Powder containers, correct? A. That's correct. Q. Okay. Let's talk about a little bit more about the PLM chrysotile analyses. So in some of your more recent reports you have been citing, it looks like McCrone and what's his name Shu-Chun Su? A. Dr. Su. MR. HYNES: Yeah. So it's I'll spell it for the court reporter. It's S-H-U, hyphen, C-H-U-N; last name is Su, S-U. BY MR. HYNES: Q. And, Dr. Longo, are you familiar with Dr. Su?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. So he's a well respected sort of expert on PLM methods and analysis, sort of what his background is? A. Yeah, I agree. Q. Okay. And do you have the 2003 paper that you cite available to you? A. I do. Q. So I guess let's look at that and your discussion, if we can use the Exhibit No. 28, where you discussed the Su information here. So if we're looking at your second supplement to the Bentley report from September 23rd, which is Exhibit 28 here, you discuss a little bit about this article on page 14 of that report, right? A.
